

# Clean water for all!

Water is one of our most precious resources. It is constantly recycled and is present today in the same quantity as it has been since the planet was formed, approximately 4.5 billion years ago. But it is not always available in the right form and in the right place where it is needed.

Steps can be taken to make sure there is enough water available for all so that no-one has to suffer the horrors of drought.

1. (a) Research some ways by which we can work towards 'water for all'.  
(b) Discuss your information with a partner or in a group.  
(c) Record your information in the table.

2. Share your information with other pairs or groups.

	How does it work?	Advantages	Disadvantages
Rainwater harvesting			
Water recycling			
Desalination			
Water restrictions
