

# 213 What's in Sand

What can you find in sand?

## STEPS

1. Put your sand samples in different bowls.
2. Add vinegar to each bowl so that the sand is covered.
3. What happens to your sand samples after you add the vinegar?
4. If you noticed a reaction in one, it is because the vinegar has affected some shells in one of your samples.

## Materials

- different types of sand (coarse and fine sand)
- vinegar
- bowls (1 bowl for each type of sand)

## Did You Know?

Sand is made up of rocks that have been worn down, but it can also contain shells washed up from the sea. Shells are the remains of dead sea animals.
